Depot Network

We are proud to introduce **Reuse-A-Wall™**, a trading division of **Blok N Mesh**, the leading manufacturer, supplier and installer of fencing and hoarding products in the UK and Ireland.

Our mission is to provide a flexible, cost-effective and reusable internal hoarding system that meets the unique needs and demands of shop-fitting, refurbishment and fit-out projects.

Whether you're working on a small-scale renovation or a large commercial project, Reuse-A-Wall™ provides a safe and reliable solution that can be customised to meet your specific needs.

Our innovative hoarding system is designed to be easily installed and dismantled, making it perfect for a wide range of applications.

With Reuse-A-Wall™, you can be confident that you're choosing a cost-effective, safe, flexible, and reusable internal hoarding system that perfectly suits the needs and demands of your shop-fitting, refurbishment, and fit-out projects.

Ideal for use in:

Supermarkets

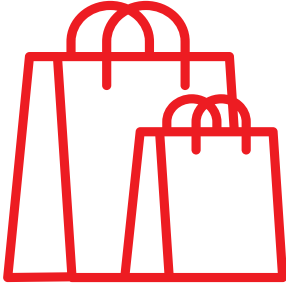

Hospitals

Train Stations

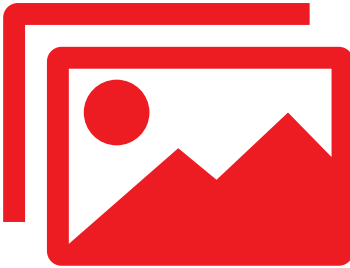

Leisure Centres

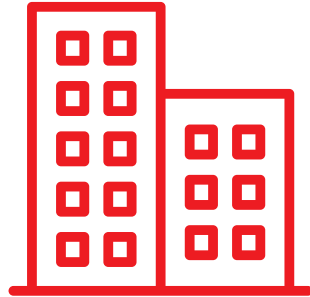

Shopping Centres

Airports

Galleries

Public Buildings

Benefits of using Reuse-A-Wall™

**Zero
Trip™**

**Minimal
Disruption**

**Impact
Resistant**

Hygienic

**Fire
Retardant**

**10 Year
UV
Stability**

Reuse-A-Wall™ is a highly sustainable product that is made from **85% recycled UPVC windows**, making it an extremely **eco-friendly** option. By utilising recycled materials, it helps to reduce the amount of waste that would otherwise end up in landfills or oceans.

Additionally, the use of recycled plastic reduces the need for virgin plastic production, which in turn helps to conserve natural resources and reduce carbon emissions.

Overall, Reuse-A-Wall™ is a great choice for those who are looking for a sustainable solution that is both environmentally friendly and cost-effective.

Introducing the revolutionary Zero Trip™ support system, exclusively available from Blok N Mesh. With Zero Trip™, partitions never protrude into public areas, ensuring maximum safety in high-traffic zones.

The panels are made of specially designed PVC profiles that are both incredibly strong and lightweight, making them the perfect solution for areas where heavy equipment cannot be used.

What's more, the system can be installed from the surface, so there is no need to work from heights.

If you're looking to create a safe environment in high-risk locations such as airports, you need to take fire safety seriously. That's where Reuse-A-Wall™ Fire Stop panels come in.

These panels have a mineral fibre core that provides superior fire ratings and non-combustibility, making them especially suitable for such locations.

With Fire Stop, you can create a fire barrier that will provide either a 30-minute or 60-minute protection, giving you peace of mind and ensuring the safety of everyone in the area.

When it comes to guiding foot traffic around ongoing building works, the Reuse-A-Wall™ Pedestrian Barriers are an ideal solution for a number of reasons.

These barriers have been designed with low-level hoarding in mind, providing an effective and attractive barrier system that can be deployed quickly and easily.

Thanks to their innovative design, these pedestrian barriers are able to guide foot traffic safely and efficiently, while also helping to ensure that the surrounding area remains clean and tidy throughout the duration of the works.

Pedestrian safety is of utmost importance, particularly in sites where renovation work is ongoing. To ensure that the general public is protected from falling objects and other on-site hazards, internal hoarding tunnels are set up to provide safe access routes.

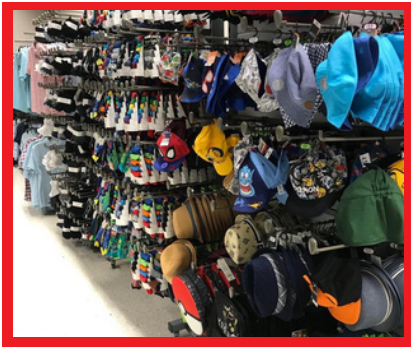

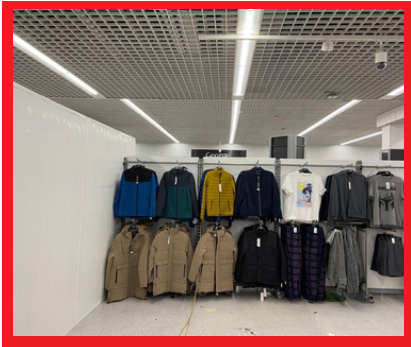

These tunnels are made up of modular PVC systems that have been designed to guide pedestrians safely from one destination to another.

They not only protect the public from potential hazards, but also shield the works from public view. The use of these hoarding tunnels provides a much-needed safety measure that is essential for any site undergoing large-scale renovation work.

If you're looking for a temporary internal hoarding system that is both mobile and merchandisable, Ready Rack™ is the perfect solution.

This innovative system is specifically designed to provide your clients with a versatile and secure hoarding that can be used during refits and remodels.

Ready Rack™ is made up of panels that are easy to lock together, creating a sturdy and reliable structure. With the help of our 50kg ballast blocks, the unit can be secured from excessive movement from the back face of the panel.

The Ready Rack™ system is also incredibly easy to move around thanks to its integrated casters. The panels can be easily unlocked and moved from the construction side only, making it simple to reposition the hoarding as needed.

In addition to its practical features, the Ready Rack™ system also comes complete with doors and corners, providing a polished and professional finish to your hoarding.

With this system, you can ensure that your clients' businesses remain functional and attractive during periods of change, without having to compromise on safety or aesthetics.

Advantages of Using Ready Rack™ System

Easy to Relocate

Locking casters allow each unit to be moved easily to desired location and secured in place

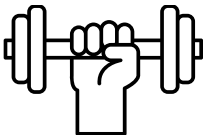

Simple Installation

Thanks to its simple locking mechanisms, contractors can install Ready Rack™ quickly and easily

Business as Usual

Continue to merchandise your products without interruption during remodels and refits

Extremely Robust

Shelving units built to hold up to 100kg worth of merchandise for each unit

Save Money

Ready Rack™ can help mitigate the loss of revenue during refits and remodels

Looking for an innovative and eco-friendly way to secure your construction site? Check out Go-Hoard™ - the ultimate site hoarding solution made from recycled PVC material.

Say goodbye to traditional timber hoarding that is easily damaged by weather or sabotage.

Go-Hoard™ is not only durable and visually appealing, but it can also be reused or recycled. With a height of 2.4m, it's the perfect alternative to traditional options.

Our innovative solution offers both on-ground and in-ground options to suit your specific needs.

2.4m PVC On-Ground

2.4m PVC In-Ground

Steel 2.4m Full Mesh Pedestrian Door

Steel 2.4m Full Mesh Vehicle Gate

You can choose from either 750kg SafeBlok™ or low-carbon ballast blocks to ensure maximum safety and stability.
